

Full-stack engineer with 3+ years across fintech, government, and SaaS. Currently the primary developer at a fast-growing NZ SaaS startup where I own the whole stack, make the technical calls, and ship the features. I care a lot about code quality and maintainability, but I care more about learning from real users than perfecting things in isolation.

## Skills

**Languages:** TypeScript, JavaScript, C#, SQL, Python, Java, C, C++

**Frameworks & Libraries:** React, .NET, .NET MAUI, Aurelia, Node.js

**Cloud & Infrastructure:** AWS, Google Cloud Platform, CI/CD pipelines, Linux

**AI & Tooling:** LLM integration, prompt engineering, Claude Code

**Practices:** Unit & integration testing, logging & monitoring, code review, agile delivery

## Experience

### Intermediate Software Engineer · Betterbunch

Jun 2025 – Present Remote, NZ

Betterbunch is a fast-growing SaaS product for small businesses. As the primary engineer, I work directly with the CTO to own the full stack day-to-day.

- **Built and shipped** an AI automation feature that generates and posts replies to Google Business reviews using Gemini, live in production. Abstracted the LLM layer using IChatClient so we can switch providers without touching the feature code.
- I'm the primary full-time developer, responsible for everything from new features to production incidents to architectural decisions, across a React/TypeScript frontend and C#/.NET backend on AWS.
- Introduced unit and integration testing, CI/CD, structured logging, and linting into a legacy codebase that had almost none of it. The app is measurably more stable and faster as a result.
- Ran A/B experiments to test different designs and used the results to improve conversion rates across the product.

### Junior Software Developer · Drive Software

Jul 2024 – Jun 2025 Christchurch, NZ

Drive Software builds station management software for radio broadcasters.

- Built and maintained full-stack features using C#, .NET, SQL Server, TypeScript, and Aurelia across a complex domain-specific product.
- Led development of a cross-platform mobile app in .NET MAUI as the primary full-time developer, taking it from requirements through to MVP.

### Software Implementation Consultant · Fast Enterprises

Nov 2023 – Jun 2024 Wellington, NZ

- Worked on GenTax, the tax system that runs Inland Revenue, fixing bugs and doing maintenance work in C#, .NET, and SQL.

### Software Engineer Intern · MTF Finance

Sep 2023 – Nov 2023 Dunedin, NZ

- Researched technology options for an upcoming overhaul of internal lending software, evaluating stacks including Python/Django and Vue alongside the existing C#/.NET/SQL setup.

### Software Developer Intern · Iris Data Science

Dec 2022 – Mar 2023 Dunedin, NZ

- Built an offline-first PWA for an agricultural client using React, JavaScript, and SQL. The app needed to work reliably with no internet connection out in the field.

### Computer Science Demonstrator · University of Otago

Feb 2023 – Jun 2023 Dunedin, NZ

- Guided students through Java assignments and lab work for COSC202 Software Development.

## Education

### Bachelor of Science, Computer Science

University of Otago · Minor in Energy Management · GPA: 8.3/9.0 (A)

Stephen Bowater Memorial Scholarship · University of Otago 150th Entrance Scholarship · Scholarship in Science
